Flexible design solutions

Flexibility of installation

FuranFlex25 and VentilFlex25 liners, when initially installed, are flexible so the installation process can cope with all applications. Our installers only require access at each end of the chimney/pipe or duct that they are working on. Most installations are completed in one day, due to the strategic planning and bespoke linings.

Over 4000 successful installations in the UK

Insurance backed 25 year guarantee

Diameters up to 1000mm

Over 3 million metres installed in over 29 countries

Always specify genuine FuranFlex25 and VentilFlex25 for guaranteed success

FuranFlex25 and VentilFlex25 Independently tested, certified and CE marked

Whole life cost

Our products are a highly cost effective solution to relining chimneys, ducts and pipes. This is because the liners have one of the longest usable lifespans in the industry. This reduces costs and downtime.

The original and the best all round flexible lining solutions

Premium quality products

The use of revolutionary materials such as enhanced plastic resins ensure our products are gas and water tight and do not require joins. This means the newly lined application can achieve optimum effectiveness. FuranFlex25 and VentilFlex25 are shock tested to withstand temperatures up to 1000°C.

Experienced qualified installers

All our installers are chosen for their integrity, expertise and ability to offer a complete service to the end users, with comprehensive factory training, certification and technical backup to ensure every project runs smoothly, on budget and on time. All installers also have access to our technical department for advice on solutions to the most demanding projects.

The invisible solution

FuranFlex25 and VentilFlex25 can be fitted to match the exact size and shape of any application that requires lining. They do this by expanding and moulding within the flue, duct or pipe when the liner is cured with steam. When completed they are stronger than steel and completely corrosion resistant.

Speed of installation

Installation times vary based on the size of the project, however the timescale usually ranges from 4 hours to a full working day with systems and ready to use once the installation process is complete.
